

COLLEGE OF EDUCATION
AND PROFESSIONAL DEVELOPMENT

Content Validity & Reliability Procedure Guide

DR. TIMOTHY MELVIN
DIRECTOR OF ASSESSMENT

Introduction

The College of Education and Professional Development (COEPD) at Marshall University has established a content validity procedure for all Education Preparation Provider (EPP) created assessments and surveys, including key assessments, performance tasks, clinical evaluations, and national board-certified exams. The EPP adopted the procedure to evaluate its assessments in Spring 2022 and beyond. The content validity and reliability procedures are used by both initial- and advanced-level programs. Procedures follow the guidelines outlined in the CAEP Evaluation Framework document for EPP-Created Assessments to design, pilot, and judge the adequacy of the assessments created by the EPP.

The purpose of the content validity procedure is to provide guidance for collecting evidence and to document the adequate technical quality of assessment instruments and rubrics used to evaluate candidates in the COEPD.

CAEP Defined Assessments

CAEP uses the term “assessments” to cover **content tests, observations, projects or assignments, and surveys – all of which are used with candidates**. Surveys are often used to gather evidence on candidate preparation and candidate perceptions about their readiness to teach. Surveys are also helpful to measure the satisfaction of graduates or employers with preparation and the perceptions of clinical faculty about the preparedness of EPP completers.

Assessments and rubrics are used by faculty to evaluate candidates and provide them with feedback on their performance. **Assessments and rubrics should address relevant and meaningful candidate knowledge, performance, and dispositions, aligned with CAEP standards**. An EPP will use assessments that comprise evidence offered in accreditation self-study reports to examine candidates at various points from admission through completion consistently. These are assessments that all candidates are expected to complete as they pass from one stage of preparation to the next or that are used to monitor the progress of candidates’ developing proficiencies during one or more stages of preparation.

Validity Vs. Reliability

Validity

- ✓ Process by which a test developer collects evidence to support the types of inferences that are to be drawn from test scores.
- ✓ Purpose to assess whether the items adequately represent a performance domain or construct of specific interest.

Reliability

- ✓ Confidence that a test score earned is a good representation of actual knowledge of the content.

COEPD 10-Step Procedure

Validity

- ✓ Form Working Group and Identify Performance Domains & Rubric Items
- ✓ Q-Sort Methodology
- ✓ Lawshe's Content Validity Ratio (CVR)
- ✓ Create or Modify Rubric
- ✓ Expert Panel Distribution
- ✓ Content Validity Index (CVI)

Reliability

- ✓ Cronbach's Alpha
- ✓ Pilot Rubric
- ✓ Calibrate Rubric
- ✓ Cohen's Kappa

VALIDITY

Step 1: Working Group, Performance Domains, & Rubric Items

✓ **Form a Small Working Group**

- The working group should consist of faculty, students, program completers, and external representatives.
- Generally, 5-7 individuals are sufficient.
- Please be mindful that the external representative must be an expert in the field.
- Be sure to document the name, employment title, years of service in the field, and employer of all completers and external representatives

Step 1: Working Group, Performance Domains, & Rubric Items

✓ Identify Performance Domains

- Identify Performance Domains with your Working Group.
- Your performance domain may be taken directly from and aligned to your specialized accreditation standards
- The performance domain should contain an operational definition.

• Example

- **COMMITMENT TO STUDENTS** (CAEP RA1.1): The creation of a learning environment and community to promote successful teaching and learning. Advanced candidates of the COEPD shall:

Step 1: Working Group, Performance Domains, & Rubric Items

✓ Compile Rubric Items

- Items in your rubric should align to and measure the Performance Domain.
- Think carefully about the realm of possibilities when creating your items. You cannot have too many items

✓ Example

COMMITMENT TO STUDENTS

All Possible Items (as defined by Working Group):

- ✓ Respects the rights of all stakeholders
- ✓ Promotes collaboration and teamwork to improve learning
- ✓ Selects, uses, adapts, and promotes evidence-based practices to meet the needs of learners
- ✓ Selects and uses valid assessment instruments to inform professional decisions
- ✓ Promotes policies and practices which facilitate a positive learning environment
- ✓ Demonstrates flexibility and adaptability to novel or unexpected situations
- ✓ Engages in tasks in a manner showing preparation and organization
- ✓ Promotes system level change to better meet the needs of student's and their families
- ✓ Advocates for student's needs

Step 2: Q-Sort Methodology

✓ Identify Panel of Experts

- The working group should now identify a Panel of Experts consisting of as many external representatives (content experts) as possible.
- The Panel of Experts should consist of at least 15 members. Although faculty, students, and program completers will be a part of the Expert Panel, strive to have as many external content experts as possible.
- Be sure to document the name, employment title, and employer of all completers and external representatives.

Step 2: Q-Sort Methodology

✓ **Distribute Virtual Q-Sort**

- Distribute a Virtual Q-Sort to the Panel of Experts. A Q-Sort is a sorting technique designed to study subjectivity (views, opinions, beliefs, values, etc.). For this process, you will conduct a Virtual Q-Sort using Qualtrics.
- Using Qualtrics, you will use the **Pick, Group, and Rank** question type in your survey. If you do not have a Qualtrics account, please request a faculty account at www.marshall.edu/qualtrics.
- Essentially, the working group takes a hard look at each possible item aligned to a domain, then ranks whether it is an **Essential** Item, an Item that is **Useful but Not Essential**, or an item that is **Not Necessary**.

Step 2: Q-Sort Methodology

✓ Distribute Virtual Q-Sort

- Steps to a Virtual Q-Sort Survey Design:
- In a new survey, write clear instructions to the Panel of Experts with expectations.
 - Select a Pick, Group, and Rank Question Type
 - Include the Domain, Operational Definition, and ALL items identified by the Working Group in Step 1. The Panel of Experts will be able to drag and drop each item into the three scales: Essential, Useful but Not Essential, or Not Necessary.
 - Distribute Virtual Q-Sort to Panel of Experts

Example of a Pick, Group, and Rank Question in Qualtrics to Conduct A Virtual Q-Sort

Q3

COMMITMENT TO STUDENTS: The creation of a learning environment and community to promote successful teaching and learning. Advanced candidates of the COEPD shall:

Items	Essential
Respect the rights of stakeholders.	
Collaborate with stakeholders to improve learning.	
Promote evidence-based practices to meet the needs of learners.	
Use appropriate data to inform professional decisions.	
Promote a positive learning environment.	
Adapt to novel or unexpected situations.	
Promote change to better meet the needs of students and their families.	
Encourage a climate of respect and self-responsibility.	

Useful But Not Essential

Not Necessary

Step 3: Lawshe's Content Validity Ratio

✓ Q-Sort Results

- Once you receive your Q-Sort Results in Qualtrics, you can obtain Lawshe's Content Validity Ratio (CVR) for each item. You first look for the total number of individuals who ranked the item as Essential (**Example #1**).
- CVR calculates a proportionate level of agreement for each item.

QID1 - Groups

#	Field	Respect the rights of stakeholders.	Collaborate with stakeholders to improve learning.	Promote evidence-based practices to meet the needs of learners.	Use appropriate data to inform professional decisions.	Promote a positive learning environment.	Adapt to novel or unexpected situations.	Promote change to better meet the needs of students and their families.	Encourage a climate of respect and self-responsibility.	Total
1	Essential	11.05% 20	11.60% 21	16.57% 30	16.02% 29	16.02% 29	5.52% 10	9.94% 18	13.26% 24	181
2	Useful But Not Essential	17.19% 11	15.63% 10	3.13% 2	3.13% 2	4.69% 3	28.13% 18	17.19% 11	10.94% 7	64
3	Not Necessary	12.50% 1	25.00% 2	0.00% 0	0.00% 0	0.00% 0	25.00% 2	25.00% 2	12.50% 1	8

Showing rows 1 - 3 of 3

Step 3: Lawshe's Content Validity Ratio

✓ Find CVR

- Download and use the CVR Calculator to obtain your CVR.
- **CVR = (ne-N/2)/(N/2)**
 1. ne = total number of respondents who rated item as Essential.
 2. N = total number of participants.

	A	B	C	D
1	Content Validity and Reliability (CVR) Calculator			
2	Item	# of respondents who rated essential (n_e)	Total # of participants (N)	CVR
3	1: Respects the rights of stakeholders	20	39	0.026
4	2: Collaborate with Stakeholders	21	39	0.077
5	3: Promote Evidence Based Practices	30	39	0.538
6	4: Use Appropriate Data	29	39	0.487
7	5: Promote Positive Learning Env.	29	39	0.487
8	6: Adapt to Situations	10	39	-0.487
9	7: Promote Change	18	39	-0.077
10	8: Encourage Respect	24	39	0.231
11	9			

Step 3: Lawshe's Content Validity Ratio

✓ Retain Items Meeting CVR

- Use the CVR Chart (on the next slide) to identify the number of participants and the CVR critical value associated with the number of participants. Compare the CVR obtained in Excel with the CVR Chart to determine the minimum CVR value required for an item to be valued based on the number of participants.
- In the example (on the next slide), you will see that since there were 39 respondents, we used **.333** as the CVR critical value. Therefore, we only retain and use items that have a CVR at or above .333.
- **NOTE:** If you used items directly from your specialized standards, and the expert panel did not rank them as essential or were NOT retained with CVR – USE THE ITEM ANYWAY because the item is from your standards.

Panel Size	N _{critical} (Minimum Number of Experts Required to Agree an Item Essential for Inclusion)	Proportion Agreeing Essential	CVR _{critical}
5	5	1	1.00
6	6	1	1.00
7	7	1	1.00
8	7	.875	.750
9	8	.889	.778
10	9	.900	.800
11	9	.818	.636
12	10	.833	.667
13	10	.769	.538
14	11	.786	.571
15	12	.800	.600
16	12	.750	.500
17	13	.765	.529
18	13	.722	.444
19	14	.737	.474
20	15	.750	.500
21	15	.714	.429
22	16	.727	.455
23	16	.696	.391
24	17	.708	.417
25	18	.720	.440
26	18	.692	.385
27	19	.704	.407
28	19	.679	.357
29	20	.690	.379
30	20	.667	.333
31	21	.677	.355
32	22	.688	.375
33	22	.667	.333
34	23	.676	.353
35	23	.657	.314
36	24	.667	.333
37	24	.649	.297
38	25	.658	.316
39	26	.667	.333
40	26	.650	.300

Step 4: Create or Modify Rubric

✓ **Working Group Creates or Adjust Rubrics**

- The working group has now identified the items to keep in a rubric based on the CVR.
- The working group may need to create a new rubric, adjust an existing rubric, and possibly modify the accompanying assessment so that it focuses on the rubric.

Step 4: Create or Modify Rubric

✓ Rubrics

- As many standards, if not most, align to candidate performance, most assessment measures will align to a performance-based rubric which will allow for:
 1. Common framework and language for assessment purposes.
 2. Performance or behavior examinations.
 3. Standard and criteria evaluations.
 4. Substantive faculty discussion on improvement.
 5. Collaboration promoting shared expectations and grading practices.

Step 4: Create or Modify Rubric

✓ Rubric Contents

- Rubric should contain the following:
 1. Domain or Standard.
 2. Operational Definition or Task.
 3. Items for Rating (skills, content knowledge, dispositions, etc.) aligned to a standard and standard component (if applicable).
 4. Levels of Performance or Mastery.
 5. Description of each characteristic at each level of performance/mastery.

Step 4: Create or Modify Rubric

✓ Rubric Development

- When creating or adjusting a rubric, discuss the following with your working group:
 1. Identify what you want to assess.
 2. Identify the items you obtained from your Q-Sort/CVR.
 3. Identify and Describe each Level of Performance/Mastery.
 1. Describe the best work you could expect using these levels (top/positive level)
 2. Describe an unacceptable product (lowest/negative level).
 3. Describe levels of intermediate or mediocre products (middle levels).

Step 5: Expert Panel Distribution

✓ Distribute Information to Panel of Experts

- Distribute the Assignment, Assignment Instructions, and the Evaluation Rubric to the same Panel of Experts used with the Q-Sort.
- Looking for Construct Validity, the panel members will rate the representativeness and clarity of each item as it relates to the overall construct using the following scales: Item is Representative/Clear, Item Needs Minor Revisions, Item Needs Major Revisions, Item is Not Representative/Clear.
- Representativeness refers to how well the item measures the domain and Clarity refers to how clearly the item is stated.
 - **NOTE:** The panel of experts will not be rating the performance indicators or descriptors. Only the items.
- Provide each expert with either a paper copy response form or a form created in Qualtrics. Example #1 demonstrates using Qualtrics to collect responses.
 - A template for paper copies can be found the COEPD Resources Microsoft Team under Assessment.

Step 6: Content Validity Index

✓ Content Validity Index (CVI)

- With data obtained from the Panel of Experts on Item Representativeness and Clarity, complete the CVI for each item:

$$\text{CVI} = \frac{\text{Number of Experts Who Rated the Item a 3 or 4}}{\text{Number of Total Experts}}$$

- Retain only items with $\text{CVI} \geq .80$.
 - If under, convene the working group to determine how the item fits with the domain or standard or how it is worded.

RELIABILITY

Step 7: Chronbach's Alpha

✓ Chronbach's Alpha

- ✓ Measure used to assess the reliability, or internal consistency, of a set of scale or test items and indicates whether an item measures the same construct.
- ✓ Chronbach's Alpha is the most common measure of reliability.
- ✓ Two alpha's will be obtained:
 - ✓ One: Representativeness
 - ✓ Two: Clarity
- ✓ Chronbach's Alpha closer to 1 is considered highly reliable. The closer to zero is less reliable.
- ✓ General rule that .80 or above is high reliability.

Step 7: Chronbach's Alpha

✓ Raw Data Set Exported to SPSS from Qualtrics

Data View Variable View

Step 7: Chronbach's Alpha

- ✓ Delete lines of Data exported from Qualtrics that may be deleted. You only need specific question responses. Notice this is in Variable view.
 - ✓ In this example, lines 1-22 will be deleted.
 - ✓ Lines 1-17 is Qualtrics collected data.
 - ✓ Line 18 was asking participants if they were faculty, staff, etc.
 - ✓ Lines 19-22 were asking for name and employer information.
- ✓ To delete, right-click on the line and select "clear"
- ✓ Note: Also deleted were lines 7, 14, 23, and 30 because those were question boxes with no responses.

43	Q17_1	Numeric	40	0	Construct Co...	{1, Dispositi...	None	5	Right	Scale	Input

Data View Variable View

Step 7: Chronbach's Alpha

- ✓ You'll be left with a clean data sheet with responses to only:
 - ✓ Representativeness
 - ✓ Clarity
- ✓ Things to notice:
 - ✓ 29 responses, but only 8 lines of data
 - ✓ Participants may have clicked on survey but did not participate.

Step 7: Chronbach's Alpha

- ✓ Select Analyze > Scale > Reliability Analysis
- ✓ Since Chronbach's Alpha is looking for internal consistency, we want to separate our two measures:
 - ✓ (1) Representativeness
 - ✓ (2) Clarity
- ✓ I know that the first question item, and every other item, relates to Representativeness
 - ✓ Beginning with the first item, select every other item and move them into the Items box.
 - ✓ Select Statistics

The screenshot displays the IBM SPSS Statistics Data Editor interface. The main window shows a data table with 34 rows and 28 columns. The columns are labeled with question items: Q1_0_1, Q1_0_2, Q1_1_1, Q1_1_2, Q1_2_1, Q1_2_2, Q1_5_1, Q1_5_2, Q2_5_1, Q2_5_2, Q1_6_1, Q1_6_2, Q1_7_1, Q1_7_2, Q2_0_1, Q2_0_2, Q2_1_1, Q2_1_2, Q2_2_1, Q2_2_2, and four empty columns labeled 'var'. The data values are mostly 1s and 2s, indicating Likert scale responses.

Overlaid on the bottom right is the 'Reliability Analysis' dialog box. The 'Items' list contains several items, including 'Please select how Repr...', 'Construct: Commitmen...', and 'Please select how the ...'. The 'Model' is set to 'Alpha'. The 'Scale label' field is empty. The 'Statistics...' button is highlighted in blue.

Step 7: Chronbach's Alpha

- ✓ Select the following:
 - ✓ Item
 - ✓ Scale
 - ✓ Scale if item deleted
 - ✓ Correlations
- ✓ Select Continue
- ✓ Select Ok

The screenshot shows the IBM SPSS Statistics Data Editor interface. The main window displays a data grid with columns labeled Q1_0_1 through Q2_2_2 and four 'var' columns. The 'Reliability Analysis: Statistics' dialog box is open, showing the following settings:

- Descriptives for:**
 - Item
 - Scale
 - Scale if item deleted
- Inter-Item:**
 - Correlations
 - Covariances
- Summaries:**
 - Means
 - Variances
 - Covariances
 - Correlations
- ANOVA Table:**
 - None
 - F test
 - Friedman chi-square
 - Cochran chi-square
- Interrater Agreement: Fleiss' Kappa:**
 - Display agreement on individual categories
 - Ignore string cases
 - String category labels are displayed in uppercase
- Asymptotic significance level (%):** 95
- Missing:**
 - Exclude both user-missing and system missing values
 - User-missing values are treated as valid
- Hotelling's T-square
- Tukey's test of additivity
- Intraclass correlation coefficient
- Model:** Two-Way Mixed
- Type:** Consistency
- Confidence interval:** 95 %
- Test value:** 0

Buttons: Continue, Cancel, Help

Step 7: Chronbach's Alpha

- ✓ Representativeness:
 - ✓ Chronbach's Alpha = .845
 - ✓ .80 or above is high reliability.

Scale: ALL VARIABLES

Case Processing Summary

		N	%
Cases	Valid	8	27.6
	Excluded ^a	21	72.4
	Total	29	100.0

a. Listwise deletion based on all variables in the procedure.

Reliability Statistics

Cronbach's Alpha	Cronbach's Alpha Based on Standardized Items	N of Items
.845	.929	8

- ✓ Repeated Steps for Clarity:
 - ✓ Chronbach's Alpha = .903
 - ✓ .80 or above is high reliability.

Scale: ALL VARIABLES

Case Processing Summary

		N	%
Cases	Valid	9	31.0
	Excluded ^a	20	69.0
	Total	29	100.0

a. Listwise deletion based on all variables in the procedure.

Reliability Statistics

Cronbach's Alpha	Cronbach's Alpha Based on Standardized Items	N of Items
.903	.905	10

Step 8: Pilot Your Rubric

- ✓ Pilot Your Rubric!
 - ✓ Make Changes as needed depending on any prior information CVR, CVI, or Chronbach's Alpha
 - ✓ If no changes are needed, distribute the assessment and use the rubric to score submissions in the next available section of your course.

Step 9: Calibrate, or “Norm” the Rubric

- ✓ Calibrating the Rubric simply means that the rubric items and scales are clear enough to lead to a consensus among faculty who are grading student work.
 - ✓ Important when various faculty or adjuncts are evaluating assessments among multiple course sections.
- ✓ Calibrating helps to ensure that the rubric use is consistent, and for the most part, free from bias.
- ✓ Calibrating helps to ensure that assessment data reflects the expectations of the program, not an individual faculty or instructor.

Step 9: Calibrate, or “Norm” the Rubric

✓ Steps to Calibrate your Rubric:

✓ Prepare Scorer Materials

- ✓ Assessment Instructions
- ✓ Evaluation Rubric
- ✓ Student Artifact

✓ Assignment Ratings

- ✓ After reading assessment instructions, rubric, and artifact, scorers will circle or indicate the candidate performance on each rubric item that they feel defines the quality of work.

✓ Share Scores

- ✓ One at a time, scorers indicate how they ranked the artifact on each item
- ✓ DO NOT share why scorers scored the artifact the way they did.

✓ Justify Responses

- ✓ Scorers justify their evaluation by pointing to specific language in the rubric and evidence in the student artifact. Discuss each piece of student work and resolve issues that may be present because of rubric language, or the evidence provided in the student artifact. Scorer consensus should be reached.

Step 9: Calibrate, or “Norm” the Rubric

✓ Scenario:

	Distinguished (4)	Proficient (3)	Basic (2)	Unsatisfactory (1)
Awareness of the impact of motivation and schema on the learning process	Lesson begins with a clear description of method to activate prior knowledge and build schema toward the learning objective(s); Includes questions that generate intellectual curiosity and engage students with the lesson content through higher order critical thinking and problem solving	Lesson begins with a clear description of method to activate prior knowledge and build schema toward the learning objective(s); Includes questions that generate intellectual curiosity and engage students with the lesson content	Lesson begins with a clear description of method to activate prior knowledge and build schema toward the learning objective(s); Includes questions, but questions lack student engagement and/or stimulation of intellectual curiosity	Lesson begins with a method to introduce the lesson content, but introduction does not activate prior knowledge and/or build schema toward the learning objective(s); Questions are not included or do not engage students in intellectual curiosity

SCENARIO: 5 Faculty members are convened to norm a rubric. A component of the rubric is “Awareness of the Impact of Motivation and Schema on the Learning Process.”

The faculty members are given the exact student artifact and asked to score the artifact using this rubric.

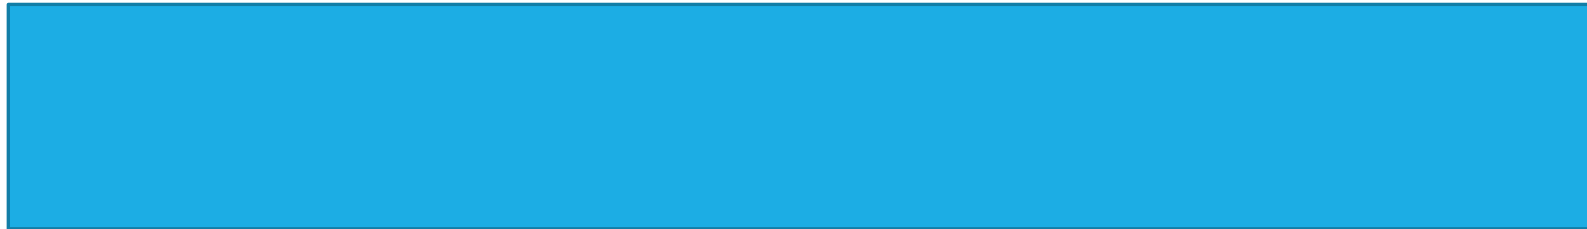

The Facilitator has asked that each evaluator provide their score for the artifact and Has recorded the following scores...

Step 9: Calibrate, or “Norm” the Rubric

✓ Scenario:

A	B	C	D	E	F
	R1	R2	R3	R4	R5
Awareness of the impact of motivation and schema on the learning process	4	4	4	2	4

How should the facilitator proceed?

Step 9: Calibrate, or “Norm” the Rubric

✓ Scenario:

A	B	C	D	E	F
	R1	R2	R3	R4	R5
Awareness of the impact of motivation and schema on the learning process	4	4	4	2	4

How should the facilitator proceed?

The facilitator should begin by asking Rater 4 (R4) to their reasoning for giving the rating of “2.” The rating could be for numerous reasons (unclear verbiage, misinterpretation, etc. The facilitator should ask for reasons behind the rating of “4.”

From that point, R4 may be willing to increase their score.

Step 10: Cohen's Kappa

- ✓ Cohen's Kappa assess the extent to which two raters agree
- ✓ Ranges from -1 to +1
- ✓ Cohen suggested that the Kappa results be interpreted as:
 - ✓ values ≤ 0 as indicating no agreement
 - ✓ 0.01–0.20 as none to slight
 - ✓ 0.21–0.40 as fair
 - ✓ 0.41– 0.60 as moderate
 - ✓ 0.61–0.80 as substantial
 - ✓ and 0.81–1.00 as almost perfect agreement

Step 10: Cohen's Kappa

- ✓ Artifacts should be randomly assigned to two raters:
 - ✓ Artifact One: Kim and Paula
 - ✓ Artifact Two: Sandra and Lisa
 - ✓ Artifact Three: Tom and Feon
 - ✓ Artifact Four: Feon and Sandra
 - ✓ Artifact Five: Lisa and Tom
 - ✓ Artifact Six: Paula and Lanai
 - ✓and so on.
- ✓ **Maintain a Master List** of who the raters are for each artifact but DO NOT share that list with the raters.

Step 10: Cohen's Kappa

✓ Using SPSS to find Cohen's Kappa

Artifact Rater Scores

The image shows two screenshots of the SPSS Statistics interface. The left screenshot displays a data table with columns 'Rater1' and 'Rater2' and rows of scores. The right screenshot shows the 'Analyze' menu with 'Crosstabs...' selected, and a sub-menu with 'Kappa' highlighted.

	Rater1	Rater2	var
1	4.00	4.00

Step 10: Cohen's Kappa

The image shows two parts of the SPSS interface. On the left, the 'Analyze' menu is open, with 'Crosstabs...' selected. The background shows a data editor with columns 'Rater1' and 'Rater2' containing numerical ratings. On the right, the 'Crosstabs' dialog box is open. The 'Row(s):' field contains 'Rater1' and the 'Column(s):' field contains 'Rater2'. A text box with the instruction 'Move the Raters into The Rows & Columns' has arrows pointing to these fields. A blue arrow labeled 'Select Statistics' points to the 'Statistics...' button in the dialog box.

a. Not assuming the null hypothesis.

b. Using the asymptotic standard error assuming the null hypothesis.

Step 10: Cohen's Kappa

- ✓ You've now established that your EPP-Created Assessments are Valid and Reliable!
- ✓ Make you sure that you document the steps taken for each semester. This documentation will be used as CAEP Evidence.
