

Utilizing the VPN Client

The VPN (Virtual Private Network) client acts as a private network while still using public lines. VPN has all the functionality and appearance of a dedicated network connection for wireless on campus users and off campus users.

The easiest way to begin is to click on your "Start" button. Then select your "All Programs", select the "MUNet VPN Client" and then the "MUNet VPN Dialer"

In the VPN window, you can either double click "Split-VPN" for off campus users, or "Wireless" for on campus wireless users.

When prompted, enter in your username and password and click the "OK" button.

When connected, you will notice the lock icon in your system tray.
