

Updating Your Operating System

It is very important to regularly update your operating system. Most XP systems on campus are set to update automatically. However, there will be times in which manual updating is necessary. This document provides a guide to manually update your system.

The easiest way to begin is to click on your "Start" button, click on your "All Programs" button and then click on the "Windows Update" section.

The Update page appears, with several sections. To check for updates, click the "Express" button.

The next window shows if you have any updates, how many, and the Installation button.
