

Using the Disk Defragmenter

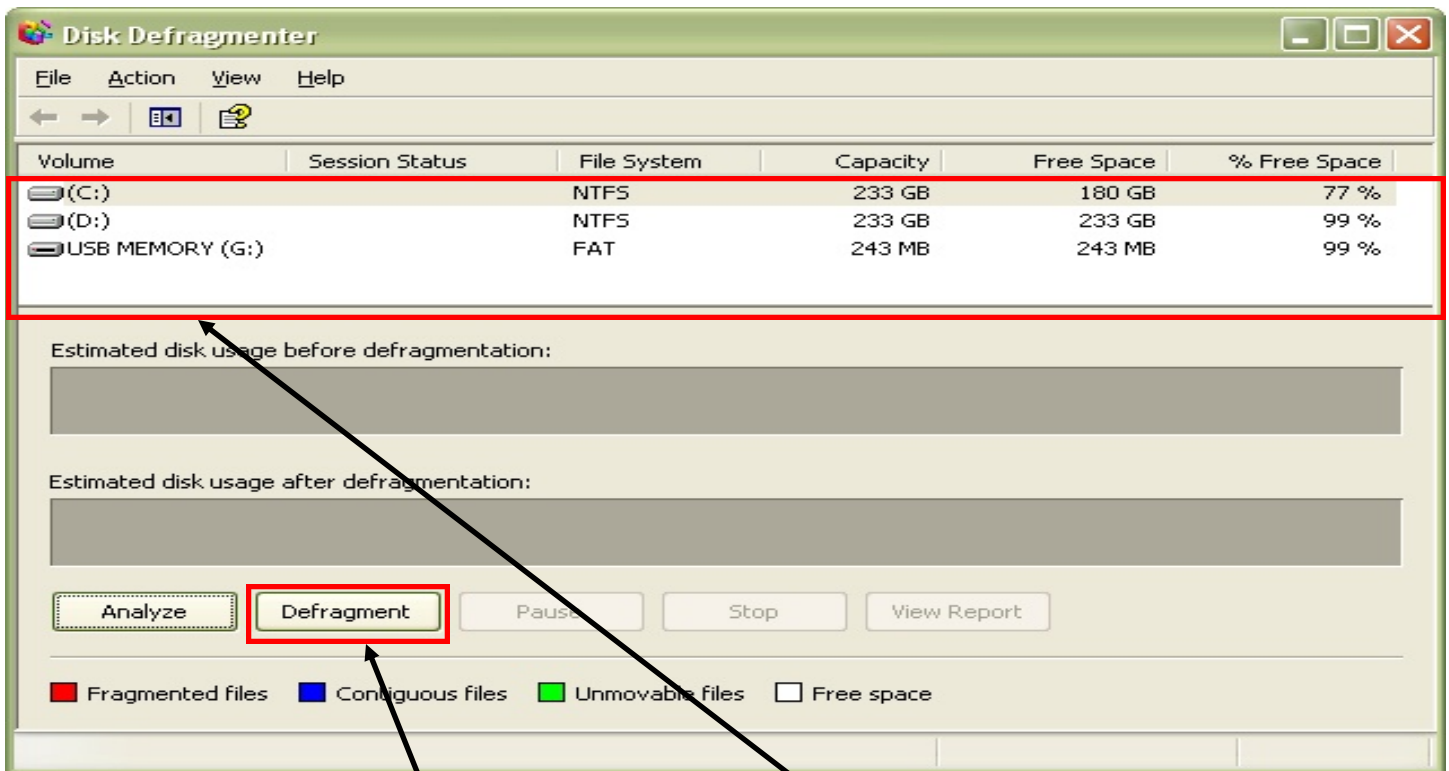

The Disk Defragmenter tool can locate, compress or remove fragmented files from your hard drive, increasing performance. The following guide will instruct you on using the Disk Defragmenter.

Note, you should always use the Disk Cleanup Utility first.

To begin, click on the "Start" button, then select "All Programs" and "Accessories"

Then, select "System Tools" and select "Disk Defragmenter" from the menu.

The next window allows you to select the drive to defrag. Once highlighted, just click the “Defragment” button.

A window will display the status of the process, which you can pause or stop at any time.
