## Who Can Use?

Created for **ALL TEACHERS!**

equip teachers with tools that empower them to effectively support students with diverse behavioral and learning needs

visual solutions for common classroom concerns

who

ABA Visualized

4

---

---

---

---

---

---

---

---

## Where To Use?

designed for use in educational settings spanning from preschool to adult transition programs

special education, inclusion, or general education classrooms

ABA Visualized

5

---

---

---

---

---

---

---

---

## How to Use?

Each strategy has met rigorous criteria showing they are useful, high quality, and effective

Common scenarios are illustrated to show what each strategy looks like in a real-life situation

Each strategy features characters referred to as "teacher" and "student" to encompass various individuals involved in teaching (i.e., teachers, paraprofessionals, service providers, etc.)

The Power  
of Visuals

**ABA Visualized**  
is the first to take an innovative approach of teaching evidence-based strategies through step-by-step visuals, making complex information more accessible and approachable.

**Research reveals that teaching families and educators through text leads to low buy-in, low engagement, low understanding, and low impact on the learner.**

9

---

---

---

---

---

---

---

---

### Teaching with Text The Traditional Way

**Low Understanding**  
Text often leads to low understanding, which hinders parents' ability to advocate for their child's needs and potentially causes misinterpretation of recommended strategies.  
(Blanks et al., 2018; Critchfield et al., 2017)

**Low Engagement**  
Teaching through complex text can lead to low engagement because the team may struggle to follow behavior recommendations and resist change when the language is overly technical or hard to understand.  
(Blanks et al., 2018; Critchfield et al., 2017)

**Low Acceptance**  
The use of technical language in behavior recommendations can lead to reduced acceptance of the recommendations, particularly among individuals with little or no training in ABA principles. In fact, researchers found that people rate ABA jargon as "not motivating" and "unpleasant."  
(Blanks et al., 2018; Critchfield et al., 2017)

**Low Accessibility**  
Text is not always accessible to everyone, as language barriers, especially for families with limited English proficiency, can hinder understanding and communication during behavior intervention discussions, leading to reduced parental engagement, misunderstandings, and increased stress and anxiety related to their child's needs.  
(Andrzejko, Hancock, & Whaley, 2019; Bradshaw & Riches, 2015; Hatcher et al., 2016; Taylor & Lundrum, 2016)

**ABA Visualized**

10

---

---

---

---

---

---

---

---

---

---

### Low Confidence

Complex technical behavior recommendations can lead to low confidence as they often result in confusion, stress, and ineffective implementation, leaving stakeholders feeling unsupported and service providers ineffective.

In our own survey of people responsible for implementing behavior strategies, only 40% reported feeling confident and only 28% reported feeling prepared.

**Feeling confident in using strategies**

40%

**Feeling prepared to support behaviors**

28%

(Blanks et al., 2018; Holt et al., 2016; Jannolowicz et al., 2008; McMahon, Feldberg, & Ardon, 2020)

### Low Collaboration

The use of technical language in behavior strategies often creates communication barriers, hindering effective collaboration between behavior specialists and stakeholders like parents and teachers.

In our own survey, only 25% of people responsible for implementing behavior strategies reported being aware of what strategies were being used in other settings.  
(Peterson et al., 2018; Sailor & McCarthy, 2015)

**ABA Visualized**

11

---

---

---

---

---

---

---

---

---

---

### Teaching with Images Behavior Essentials, Visualized New Innovative Approach

**Better Understanding**  
Visuals make concepts easier to understand and they help teachers and parents better grasp behavior management strategies, making learning and skill application more effective.  
(Albers & Green, 2010; Elward et al., 2021; Hughes & Frederick, 2006; Sung-Hye, K., 2022)

**More Preferred**  
Research has shown that most people overwhelmingly prefer and find instructions with visuals easier to use than traditional written instructions, indicating a clear preference for visuals over text-based content.  
(Griff & Kanton, 2012)

**More Engagement**  
Visuals improve engagement by capturing and holding the viewer's attention more effectively, as shown through eye-tracking studies. Visual storytelling makes the content more memorable and viewers engage longer.  
(Harsh et al., 2019; HubSpot, 2022; Parodi, D., 1998)

**More Accessible for Diverse Needs**  
Visuals offer greater accessibility, ensuring that those with diverse needs can access and understand the information.  
(Abdurahman, et al., 2020)

**ABA Visualized**

12

---

---

---

---

---

---

---

---

---

---

**Higher Accuracy**  
Visuals significantly improve accuracy in comprehension, recall, and implementation. In one study, participants' accuracy in a behavior skill went from 38% to 99% when diagrams were added to the instructions, and accurate learning took less time!

**Accuracy when taught with text**  
38%

**Accuracy when taught with visuals**  
99%

Additionally, visual supports have been shown to improve educators' accuracy of implementing behavior strategies in both special education and general education classroom settings.

Gross & Root, 2018; Graff & Kinsler, 2012; Kinsler & Kinsler, 2006; Meyer & Behring, 2010

**Increased Confidence**  
Training with visual supports has been shown to boost confidence among parents and teachers in managing challenging behaviors.  
(Closs & Brady, 2006)

**Better Collaboration**  
The use of visuals has been shown to enhance communication between service providers, parents, teachers, fostering more effective collaboration in behavior management.  
(Zarcone & Lindquist, 2006)

## Book Overview

Building Motivation	Preventing Challenging Behaviors	Teaching New Skills	Responding to Challenging Behaviors	Templates and Tools
Proactive approaches to enhancing student engagement	Classwide and individual strategies that aim to set students up for success	Versatile strategies for building essential skills	Strategies for supporting students using a calm and compassionate approach	Custom made collection of blank visual templates and tools

14

---

---

---

---

---

---

---

---

## Behavioral Approach to Helping Students

**WHY?**

1. Behavioral success leads to academic success.
2. Teachers can tailor interventions and support plans to meet the needs of each student
3. Taking a behavioral approach can have a significant impact on a student's self-esteem, overall well-being, and improve their overall attitude toward school

## Classroom Management

establishes clear boundaries and expectations

- Class wide behavior strategies
- Promotes active engagement
- Considers seating arrangements
- Focuses on overall environment
- Differentiated instructional strategies
- Establishing expectations
- Promotes participation and academic achievement
- Sets the tone and culture for the classroom
- Routines clearly established

## Behavior Management

provides individualized support for each student

- Focus on reinforcing positive behavior
- Individualized strategies based on student-specific needs
- Targets specific student behaviors
- May include a Behavior Intervention Plan (BIP)
- May include service minutes and instruction to support behavior
- Prioritizes preventive and skill-building strategies
- May include a skill-building goal
- May include a goal to reduce behaviors
- Addresses disruptive or challenging behaviors

---

---

---

---

---

---

## Understanding and Celebrating Neurodiversity

The term **neurodiversity** was first introduced by autistic sociologist Judy Singer in 1997.

**NeuroDiversity**  
The Birth of an Idea

Neurodiversity is a concept that embraces the differences in the human brain as being natural, normal, and not “less than” those without these differences.

JUDY SINGER  
The ground-breaking sociology thesis that proffered the last great liberation movement to emerge from the 20th century

ABA Visualized

23

---

---

---

---

---

---

---

---

## Autism Spectrum Disorder

notable impacts on social skills, speech, and communication

language delay is common

recent research suggests that about 25% of individuals with autism are nonvocal or “minimally verbal”

engagement in repetitive behaviors or focal interests

although not communicating vocally this does not mean that they cannot understand or cannot learn

ABA Visualized

24

---

---

---

---

---

---

---

---

# Autism Spectrum Disorder

Often thought about as a linear.

Low-Functioning High-Functioning

These limitations and labels are often limiting.

ABA Visualized

25

---

---

---

---

---

---

---

---

Instead of looking at autism as linear from  
“less autistic” to “more autistic,”  
**Behavior Essentials, Visualized** encourages us  
to look at autism like this...

26

---

---

---

---

---

---

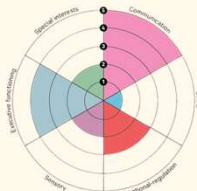

---

---

think of it like this

## An Autism Spectrum Color Wheel

*We all come  
in all shapes  
and hues.  
This is art.*

- Alex Baughns,  
Autistic self-advocate

ABA Visualized

27

---

---

---

---

---

---

---

---

## Attention Deficit Hyperactivity Disorder (ADHD)

- needs specific strategies for organization and time management
- occurring in 10% of children aged 3-7
- children are typically diagnosed in their early school years due to trouble paying attention, controlling impulsive behaviors, or being overly active
- key behaviors are inattention and hyperactivity/impulsivity

ABA Visualized

28

---

---

---

---

---

---

---

---

## Down Syndrome

- current rate of Down Syndrome is 1 in 700 births in the U.S.
- mild to moderate intellectual abilities
- increased risk for comorbid diseases including congenital, heart defect, pulmonary hypertension, and hearing and vision challenges
- most common chromosomal condition
- low muscle tone (hypotonia) and slower growth rate compared to typical peers

ABA Visualized

29

---

---

---

---

---

---

---

---

## Obsessive-Compulsive Disorder (OCD)

- may experience anxiety, depression, or increased engagement in disruptive behaviors
- 1 in 100 children
- recurring, unwanted thoughts, ideas, and sensations (obsessions), that make them feel driven to do something repetitively (compulsions)
- compelling behaviors take up a significant amount of time (more than one hour each day) and commonly interfere with other daily activities

ABA Visualized

30

---

---

---

---

---

---

---

---

**7 Neurodiversity-Affirming Practices for Teachers**

“Research shows that fostering a neurodiverse-affirming environment enhances students’ self-esteem, confidence, and academic achievement. Embracing neurodiversity not only promotes diversity and inclusion but also fosters a culture of respect and celebration of individual differences.”

ABA Visualized

31

---

---

---

---

---

---

---

---

**1. UTILIZE A STRENGTH-BASED APPROACH**

- Instead of viewing neurodiverse students through a “deficit” lens, it is crucial to highlight their strengths and abilities.
- By focusing on what they **CAN** do rather than what they struggle with, we can empower them to be embraced for their individuality and thrive.

ABA Visualized

32

---

---

---

---

---

---

---

---

Instead of saying this	Use this strength-based language
Rigid	Passionate, dedicated, persistent
Restricted interest	Knowledgeable and curious about
Off in their own world or space cadet	Imaginative and creative
Weird or nerdy	Fascinating, eccentric, and individualistic
Stimming or hyperactive	Animated

ABA Visualized

33

---

---

---

---

---

---

---

---

## 2. PRESUME COMPETENCE

- believing in the competence of each student doesn't mean ignoring the existence of their disabilities. Instead, it is about recognizing that learning and growth are always possible.
- also includes validating all forms of communication (speaking, signing, using AAC devices, writing, gestures, or pantomime)

ABA Visualized

34

---

---

---

---

---

---

---

---

## 3. ACCOMMODATE DIVERSE NEEDS

Small adjustments can significantly impact the educational experience of our neurodiverse students.

“ We need to break the idea of what a 'good classroom' looks like with all students sitting still, looking forward toward the teacher, or quietly and calmly working independently. Instead, we need to recognize that attending and engaging looks different across different students, and we need to allow self-regulation. ”

ABA Visualized

35

---

---

---

---

---

---

---

---

### Flexible Seating

various seating options

incorporate textures under desks for sensory input

allow minor behaviors like twirling pens or walking around

### Sensory-Friendly Classrooms

quiet corners

noise-canceling headphones

dimmed lighting

### Visual Supports

colored circles for seating arrangements

visual timers

academic visuals to enhance engagement and comprehension

ABA Visualized

36

---

---

---

---

---

---

---

---

**4. FOSTER AN ACCEPTING CLASSROOM CULTURE**

**"At an early age, students view themselves as a 'good learner' or 'successful in school' or not, and this is often shaped by teachers. This impacts their self-esteem as an adult."**  
**-Arielle Starkman**

ABA Visualized

37

---

---

---

---

---

---

---

---

**Promote Acceptance In Your Classroom**

- incorporate books with neurodiverse students into your curriculum and classroom libraries
- allow students to make choices within the classroom
- celebrate events like Down Syndrome and Autism Acceptance month
- recognize and celebrate the achievements of both neurotypical and neurodiverse students
- reassure students facing concerns about fairness

ABA Visualized

38

---

---

---

---

---

---

---

---

**5. Use Inclusive Instructions**

- encourage students to explore their hyperfocus and special interests
- deliver clear and specific instructions
- provide visual checklists for common routines to guide neurodiverse students and reduce anxiety
- utilize materials that your students are interested in
- offer diverse learning stations
- folder systems for independent work periods where students can choose tasks throughout the week

ABA Visualized

39

---

---

---

---

---

---

---

---

**6. Embody a Relationship-First Approach**

Build relationships with our students where they feel like they can be themselves and not be judged or feel they have to hide who they are.

Masking refers to the conscious or unconscious efforts of individuals to hide or suppress their neurological differences.

Masking requires significant emotional and cognitive toll on the individual

40

---

---

---

---

---

---

---

---

**7. Prioritize Emotional Regulation**

“Starting the day by checking in with your students can be incredibly meaningful.”  
-Michelle Vinokurov, autistic self-advocate”

teach self-regulation strategies throughout the day

embed emotional literacy into the curriculum

offer alternatives to emotional expression such as journals, emotion wheels, or “feelings” check-ins

41

---

---

---

---

---

---

---

---

**Amplifying Neurodiverse Voices**

**The FIRST methodology provides framework for teaching students with ADHD .**

Pokribcakova, S., et al. (2015). *Teaching Foreign Languages to Learners with Special Educational Needs: e-textbook for foreign language teachers (pp.83-90)*. Nitra: Constantine the Philosopher University.

42

---

**HAPPY RELAXED + ENGAGED**

HAPPY RELAXED + ENGAGED  
HAPPY RELAXED + ENGAGED  
HAPPY RELAXED + ENGAGED  
HAPPY RELAXED + ENGAGED  
HAPPY RELAXED + ENGAGED

In his paper "A Perspective on Today's ABA," Dr. Greg Hanley emphasizes that when students are "happy, relaxed, and engaged," teachers convey acknowledgement, visibility, and support, reducing the likelihood of challenging behaviors.

44

---

---

---

---

---

---

---

---

## Supporting Paraprofessionals

- Paraprofessionals play a crucial role in the classroom, providing one-on-one assistance, implementing behavior plans, and ensuring each student has access to a quality education
- Research shows 75% of school-based paraprofessionals encounter challenging student behavior on a daily or weekly basis, spending over 20% of their day addressing these behaviors.

ABA Visualized

---

---

46

---

---

---

---

---

---

---

---

## 8 Tips for Finding Time for Paraprofessional Training

1. Schedule Mini-Training Sessions
2. Co-Teach to Demonstrate Best Practices
3. Utilize "Teachable Moments"
4. Empower Through Peer Observations
5. Create a Resource Center
6. Online Professional Development
7. Provide Feedback and Encouragement
8. Promote Communication and Collaboration

ABA Visualized

47

---

---

---

---

---

---

---

---

## Embodying a Trauma-Informed Approach

**Acknowledge the potential for trauma:** Recent data suggests that 61% of adults and 45% of children have experienced at least one potentially traumatic event. This estimated is higher for those with disabilities.

**Ensure safety and trust:** consider environment, build rapport, and ensure ongoing safety by honoring moments of withdrawal, promoting coping skills, and training the entire team on strategies for maintaining physical and emotional safety during high-intensity behaviors

**Promote choice and autonomy:** choices give students a sense of control over their daily lives

**Emphasize skill building:** prioritize skills and strategies that promote self-advocacy, communication, and independence

# Understanding Why Challenging Behaviors Occur

Functions of Behavior

ABCs of Behavior

Approachable Guide to FBAs

ABA Visualized

50

---

---

---

---

---

---

---

---

## Functions of Behavior

Functions of behavior refers to the reason someone is engaging in a behavior. Understanding why is essential to properly design the behavior support plan. The ABCs of Behavior are a tool used to understand the function of a behavior. The ABCs of Behavior are a tool used to understand the function of a behavior. The ABCs of Behavior are a tool used to understand the function of a behavior.

1. Attention (from others)  
2. Access to an item or activity  
3. Escape from a demand  
4. Sensory (feel good or bad)

This means that for any behavior that is occurring, it is happening because the individual is either seeking attention, gaining access to an item/activity, escaping a demand, or because it makes the individual feel good.

In the previous example about a student who talks around the classroom, we will need to determine if he is gaining attention from the teacher when he is talking around the room in order to access more positive reinforcement in the hallway, talking or preventing him from completing an assigned task (i.e. a filling a sensory need for movement).

We can determine the function of the behavior by using the ABC's (p. 20). Use the ABC's template (p. 20) to record the function of the behavior. The ABC's template is a tool used to understand the function of a behavior. The ABC's template is a tool used to understand the function of a behavior.

In the next example, we will examine how one behavior could occur for four different reasons, and how to determine the reason. The example behavior chosen is a student engaging in self-harmful behavior (SHB) by hitting himself on the head.

### Class the behavior to its function: Attention

The individual was previously receiving attention from someone other than that person assigned giving attention just before the problem behavior occurred.

- Immediately after the problematic behavior someone gave the individual attention. Remember that responses like "No," "Don't do that!" are also a form of attention.

The student receives attention after he engages in the behavior.

When behaving the SHB, the teacher is giving attention by responding to the student. Remember responses like "No," "Don't do that!" are also a form of giving attention.

### Class the behavior to its function: Escape

A problem behavior or activity was used to escape from the individual just before the problematic behavior occurred.

- The individual was told "No," "Don't do that!" or "Wait!"
- Immediately after the problematic behavior, someone gave the individual a preferred item or activity.

The student engages in problematic behavior after being told "No," "Don't do that!" or "Wait!"

Here, the student asked for the phone and was told "No" immediately prior to the SHB.

**Instructions for filling out ABC Chart**

1. Choose one behavior to observe and record. (e.g., "John is hitting his friend.")
2. Give your friend a warning. (e.g., "John, stop hitting your friend. If you hit again, I will report it to the teacher.")
3. Observe and record the behavior. (e.g., "John hit his friend 3 times.")
4. Record the behavior. (e.g., "John hit his friend 3 times.")

**ABC Chart Example**

Antecedent	Behavior	Consequence	Function
John hit his friend.	John hit his friend 3 times.	John hit his friend.	
John hit his friend.	John hit his friend 3 times.	John hit his friend.	
John hit his friend.	John hit his friend 3 times.	John hit his friend.	
John hit his friend.	John hit his friend 3 times.	John hit his friend.	
John hit his friend.	John hit his friend 3 times.	John hit his friend.	
John hit his friend.	John hit his friend 3 times.	John hit his friend.	
John hit his friend.	John hit his friend 3 times.	John hit his friend.	

**Your turn!**

Choose one behavior to observe and record. (e.g., "John is hitting his friend.")

Give your friend a warning. (e.g., "John, stop hitting your friend. If you hit again, I will report it to the teacher.")

Observe and record the behavior. (e.g., "John hit his friend 3 times.")

Record the behavior. (e.g., "John hit his friend 3 times.")

ABA Visualized

61

---

---

---

---

---

---

---

---

**First, Then**

Using a simple statement to increase compliance

**Goal**  
Increase motivation and compliance in completing tasks.

**How?**  
Present a statement that will likely lead to compliance by the student (e.g., "After you finish your math homework, you can watch a video of your favorite animal.")

**Context**  
This strategy is most effective when the student is motivated to complete the task. It is best used when the student is not motivated to complete the task.

**Tip**  
Use simple and concrete language. The student should understand the statement. Use a simple statement that is easy to understand. Use a simple statement that is easy to understand.

**1 State the demand using 'First, then'**  
The teacher says, 'First, then.' The student says, 'First, then.'

**2 Follow through**  
The teacher says, 'Then, then.' The student says, 'Then, then.'

**3 Reinforce**  
The teacher says, 'Then, then.' The student says, 'Then, then.'
