4 Objectives

- 4.1 The objective of the policy is to ensure that the future growth of the Investment Pool is sufficient to at least offset inflation, thereby preserving the constant dollar value and purchasing power of the Investment Pool. This primary objective will be accomplished through a carefully planned and executed portfolio strategy. The objective of the portfolio strategy is to enhance the Investment Pool's long-term viability by maximizing the value with a prudent, balanced level of risk. Safety of principal, liquidity and conservative capital growth will be the guiding investment principles for asset groups that have a less than a long term time horizon.
- 4.2 The assets will be managed on a total return basis and performance compared to blended benchmarks. While the policy recognizes the importance of preservation of capital, it also adheres to the principle that varying degrees of investment risk are generally rewarded with compensating returns. It is not a breach of fiduciary responsibility to pursue riskier investment strategies if such strategies are balanced and in the participants' best interest on a risk-adjusted basis. The assets' investment time horizon will guide the level of risk for the asset group.
