

Humanistic Online Model for Engagement

Because it is focused on delivery as well as design, the HOME framework goes beyond the familiar Structural Standards to also include Experience Standards. This is the result of a collaborative effort among instructional designers and faculty to (1) vet industry-standard components for quality assurance, such as QM, and (2) customize Marshall-specific standards for a humanistic experience. The H.O.M.E. framework presents 6 standards, each accompanied by annotations.

Note: If you are teaching a fully online course, the US Department of Education requires that your course include “regular and substantive interaction” (RSI) between students and between the students and the instructor. See the [RSI infographic](https://www.marshall.edu/design-center/h-o-m-e-at-marshall/) on the HOME webpage: <https://www.marshall.edu/design-center/h-o-m-e-at-marshall/>
